CAREER OBJECTIVE

Motivated Software Engineering student at FPT University with hands-on experience building full-stack applications using **Spring Boot**, **React**, and **SQL Server** through collaborative academic projects. Seeking a **Backend / Full-stack Developer internship** to contribute API design, UI development, and system analysis skills in a professional environment.

EDUCATION

FPT University — *Software Engineering*

2024 – 2028

GPA: 3.0/4.0

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, C#, C/C++, SQL
Frontend	React 18, HTML/CSS, Tailwind CSS
Backend	Spring Boot 3.2, Spring Data JPA, REST API, JWT
Database	SQL Server 2022, ERD Design, JPA Mapping
Tools	Git (Git Flow), Maven, npm, Postman, Draw.io, PlantUML
Libraries	MapStruct, Lombok

PROJECTS

RMS — Restaurant Management System

 [Source Code](#)

Team Project · In Progress

[React 18](#) · [Java 21](#) · [Spring Boot 3.2](#) · [SQL Server](#) · [JWT](#)

Frontend (React 18):

- Designed and developed the **Cashier POS Dashboard** with real-time table status grid and dynamic cart management.
- Built the **Payment Modal** with virtual numpad, QR code integration, and auto-calculated VAT receipt.
- Created **Public Menu** page with food categories, smooth scrolling effects, and responsive layout.

Backend (Spring Boot 3.2):

- Designed API documentation for **15+ endpoints** across 3 sprint iterations for the ordering module.
- Developed **6 REST APIs** for QR-based ordering and order management workflows.
- Co-designed the system **ERD and Database schema** with complex entity relationships across all iterations.
- Applied **Controller → Service → Repository** architecture with Entity/DTO separation using MapStruct.
- Implemented centralized error handling with **ApplicationError** enum and **GlobalExceptionHandler**.

TEAMWORK & LEADERSHIP

- Secretary & Documentation Lead:** Recorded instructor feedback during sprint reviews; proactively maintained team's shared README with feature updates and API documentation.
- System Analysis & Database Design:** Analyzed requirements and created Use Case diagrams for assigned modules. Contributed to the overall ERD/Database architecture across 3 iterations.
- Git Workflow Management:** Established Git Flow and Conventional Commits guidelines. Created Pull Request templates to enforce code review standards before merging.
